1. Local Corpus
Local items share a searchable schema
item record
metadata fields
text content
image / file
local domains
product
email
closed-world local index
2. Query Intents
Compose user queries from orthogonal intent types
metadata filter
+
text intent
+
image intent
AND / OR
3. Executable Targets
Generate executable labels for supervised evaluation
SQL target
SQL filters
<text_0> query
<image_0> query
ground-truth IDs
4. Evaluation Split
Evaluate by split and query difficulty
train
dev
test
difficulty buckets
single-condition
compositional
cross-modal
hard negatives
